No Compromises with Wireless Installation

With wired systems, installers often have to compromise detector placement, especially in older residential homes. However, the wireless Life Safety Detector Trio can be installed to maximize protection with minimal compromise to your home's structure. Faster, easier installation also means less on-site installer time – allowing you to get on with the business of your day.

Reliability Assured

The combination of on-site alarms from the detectors PLUS the continuous communication with the central monitoring station and emergency dispatch as required, the Life Safety Detector Trio has your home covered from top to bottom. The detectors also transmit important status messages to the central monitoring station such as battery conditions, tampering, malfunction supervision, and more.

Contemporary, Streamlined Design

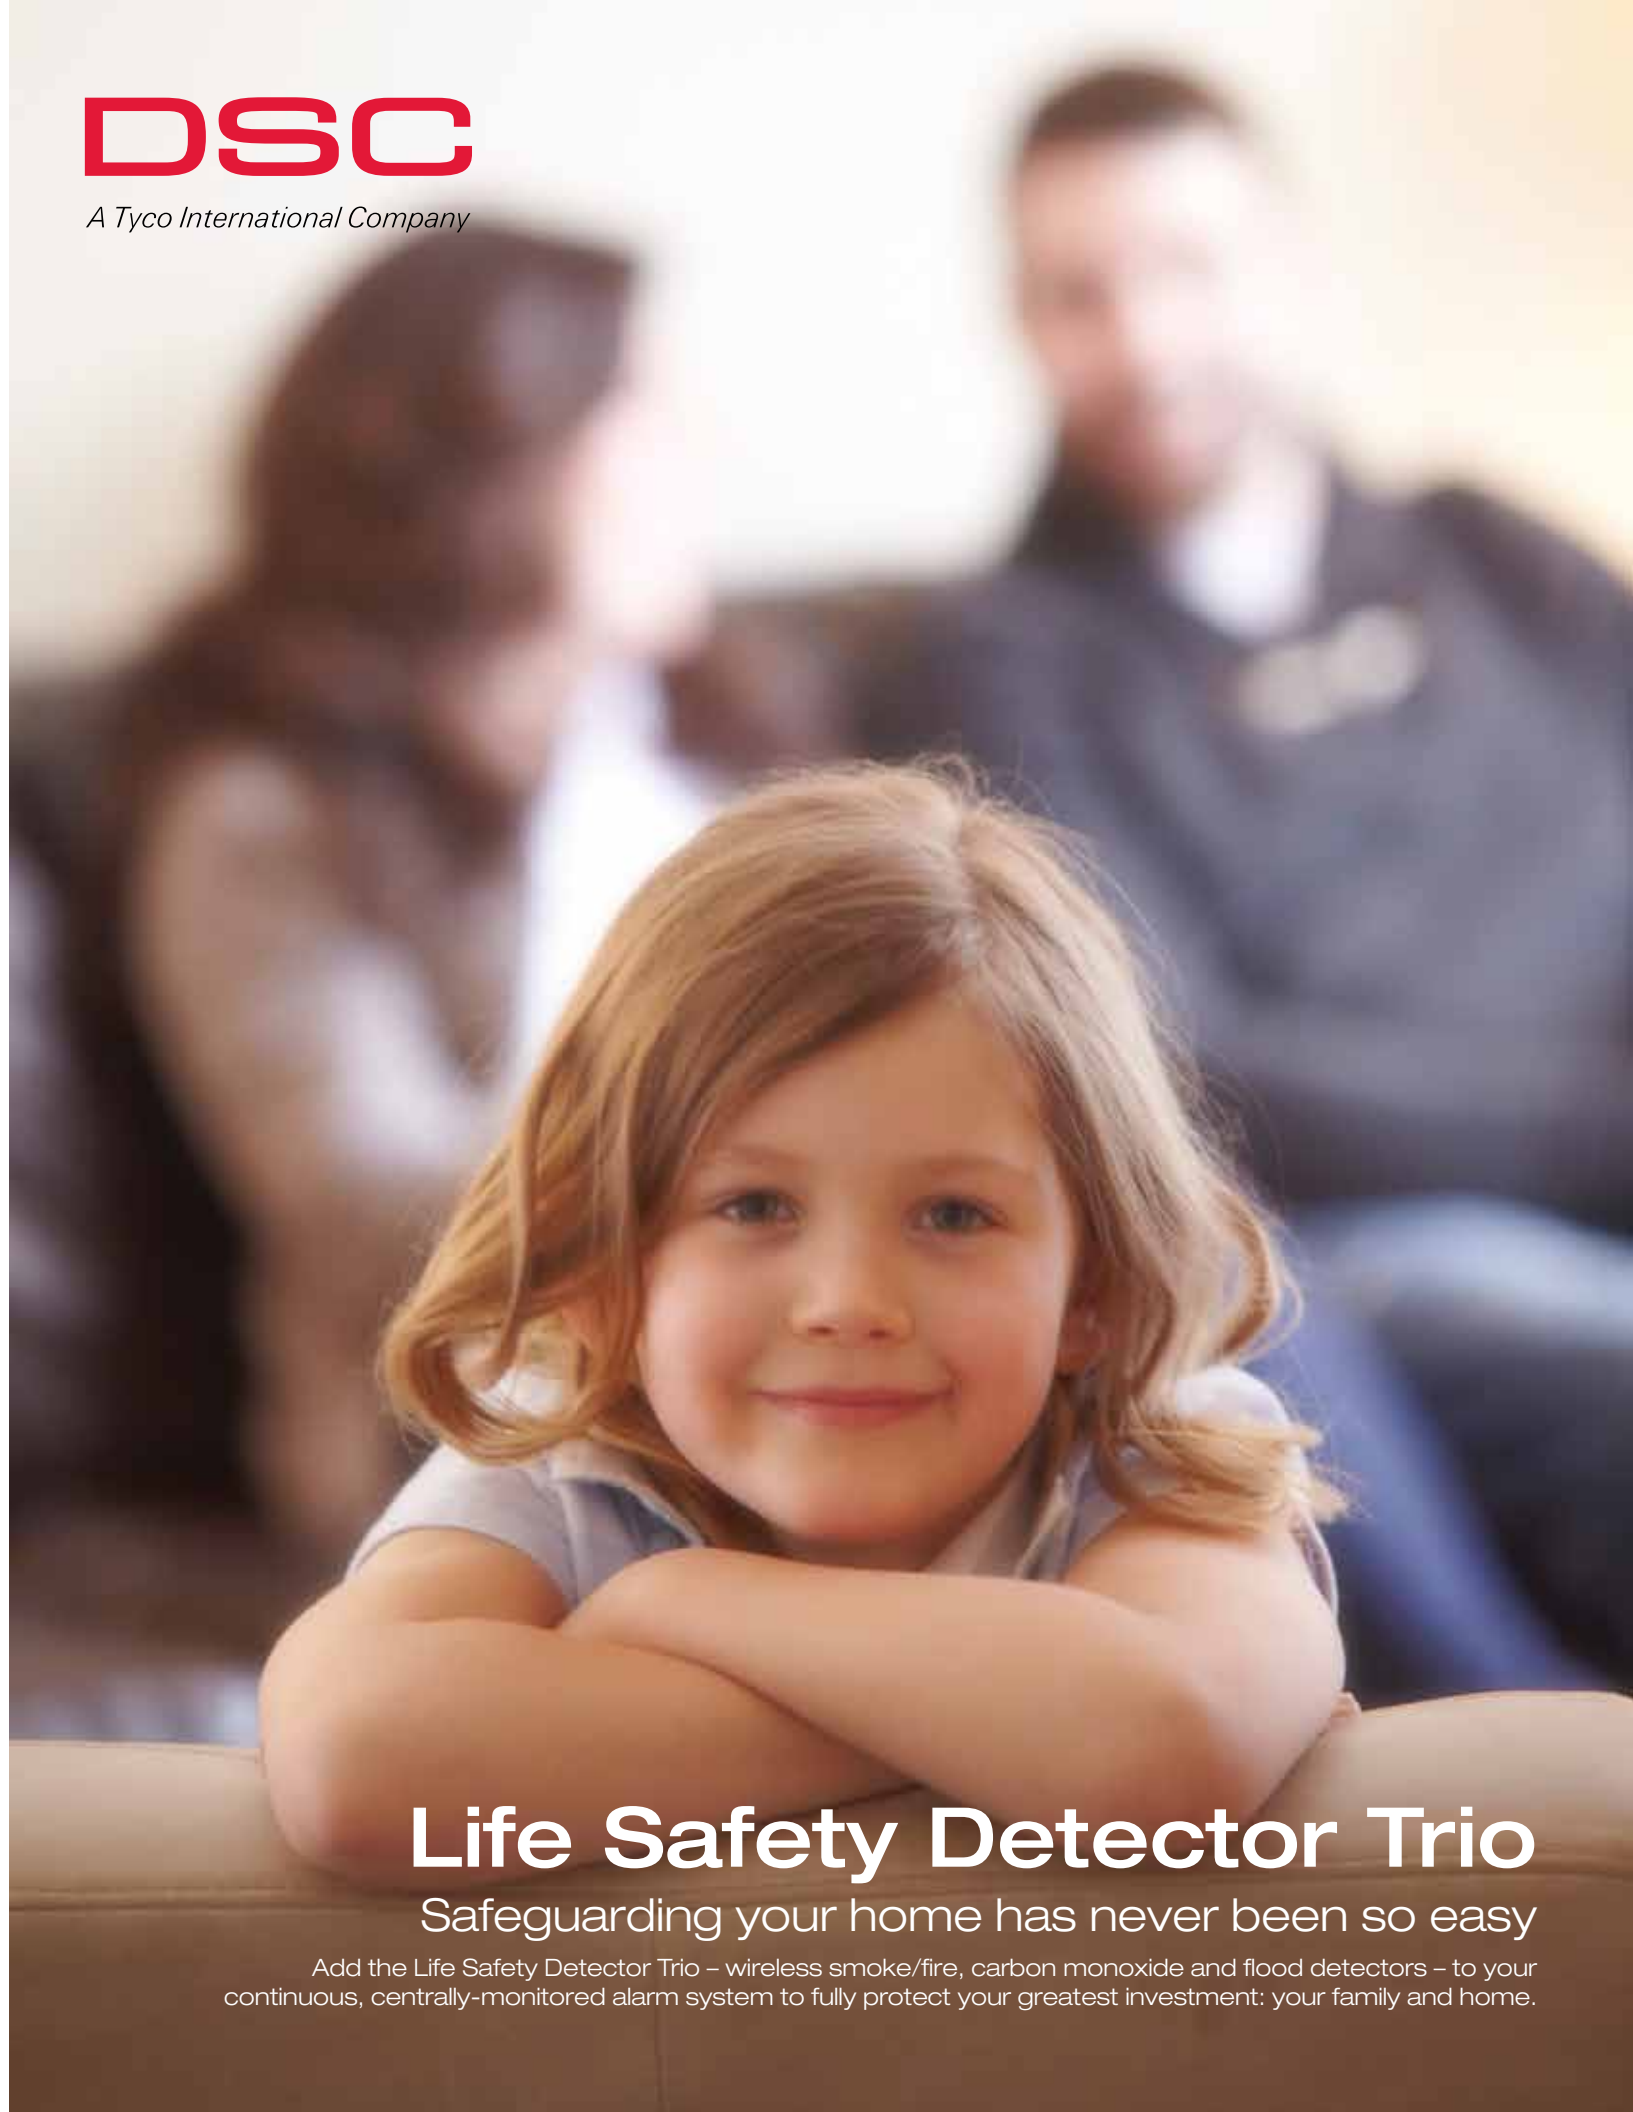

The Life Safety Detector Trio devices have a sleek and contemporary look to inconspicuously blend into your home décor without compromising performance.

Safeguard your home by adding the Life Safety Detector Trio to your wireless security system.

Life Safety Detector Trio

Safeguarding your home has never been so easy

Add the Life Safety Detector Trio – wireless smoke/fire, carbon monoxide and flood detectors – to your continuous, centrally-monitored alarm system to fully protect your greatest investment: your family and home.

Safeguarding your Greatest Investment: Your Family and Home

A centrally monitored alarm system addresses only one part of a home security equation – protection from unwanted entry and movement. Now with the Life Safety Detector Trio, you can have complete home security ‘peace of mind’ with a trio of wireless detectors for smoke/fire, carbon monoxide and flood. Many homes have these detectors, but often they are ‘stand alone’ and not centrally monitored. The DSC Life Safety Detector Trio is centrally monitored by security professionals AND has in-home alarms as well.

Smoke/Fire

The DSC Wireless Smoke Detector is easily installed where ever needed, including in difficult-to-wire areas like high vaulted ceilings.

- Uses photoelectric sensor and leading edge technology to detect smoke and automatically compensates for dust accumulation.
- Built-in alarm with a test button.
- Long-life lithium batteries (included).

Safeguard your home with a DSC Smoke Detector.

Carbon Monoxide

Colorless, tasteless and odorless but deadly, carbon monoxide (CO) is impossible to detect without a warning device. The DSC Wireless Carbon Monoxide Detector protects against potential carbon monoxide poisoning.

- Uses electrochemical sensing technology to detect even trace amounts of carbon monoxide.
- Built-in alarm provides instantaneous warning.
- Long-life lithium batteries (included).

Safeguard your home with a DSC Carbon Monoxide Detector.

Flood Detector

The DSC Wireless Flood Detector senses the presence of water leaks or flooding in basements, laundry rooms, bathrooms, kitchens and more. Water damage claims can increase future insurance rates.

- Detector senses water with a wire probe and transmits the signal to the monitoring station.
- Long-life lithium batteries (included).

Safeguard your home with a DSC Flood Detector.
